

SDG Eligibility Engine

Mock Producer API (POC) - Customer Snapshot

Synthetic test data only | March 2026

1. Overview

Mock Producer API simulating the Eligibility Engine loan journey. Not connected to real bureau, Perfios, Posidex, or Hunter systems.

Flow: Partner POSTs EE initiate JSON -> ACK + producer callbacks (mock).

- Callbacks: mbCibil, mbEquifax, mbHighMark, mbMbEot, perfios, posidex, hunter, summary

2. Public Access

No OpenShift login required. Use these URLs directly (clickable in PDF):

Base URL:

<http://localhost:8081>

Web UI:

<http://localhost:8081/>

Swagger API docs:

<http://localhost:8081/docs>

Health check:

<http://localhost:8081/api/health>

Sample initiate JSON:

<http://localhost:8081/api/samples/ee-initiate-request>

Main API (generate callbacks):

<http://localhost:8081/api/eligibility/generate-callbacks?scenario=clean-approval>

3. Sample Identity

From EE- initiate request V1.0.txt (spec sample - not real customer data):

Field	Applicant	Co-applicant
Name	PRANAV SANTOSH	PRANAV SANTOSH
DOB	1982-09-26	1982-09-26
PAN	QAZPC8801X	QAZPC8801X
Email	abcdefg@gmail.com	abcdefg@gmail.com
Gender / Age	M / 25	M / 25

Journey IDs: partnerJourneyID 345005711293 | bankJourneyID 45562927123 | partnerID FYNDNA | channelID CHANNEL_FYNDNA_HL1 | productName FYNDNA_HL1

4. Request Format

- POST the full EE initiate JSON as the request body (see Appendix A)
- Body matches EE- initiate request V1.0.txt exactly
- productDetails is under applicant (not at root)
- Do NOT include orcJourneyID in the request
- Optional query: ?scenario=clean-approval (also: thin-file, fraud-hit, posidex-match, bureau-not-found)

5. Quick Tests

Health check:

```
curl http://localhost:8081/api/health
```

Generate callbacks (direct POST with full EE initiate JSON):

```
curl -X POST "http://localhost:8081/api/eligibility/generate-callbacks?scenario=clean-approval" \
-H "Content-Type: application/json" \
-d '<EE initiate JSON - full command in Appendix A>'
```

Expected: ACK + 8 callbacks; PAN, name, and DOB match the initiate request. Complete copy-paste curl is in Appendix A.

6. Notes

- POC environment - public URL, no API authentication (not for production)
- Input spec: EE- initiate request V1.0.txt
- Output specs: producer callback sample files in EE spec pack
- Async mode: POST http://localhost:8081/api/journey/initiate (~3s between callbacks)

Appendix A - Complete generate-callbacks curl

Copy and run this command. The -d body is the full EE initiate JSON from the spec sample.

```
curl -X POST "http://localhost:8081/api/eligibility/generate-callbacks?scenario=clean-approval" \
-H "Content-Type: application/json" \
-d '{
